

Thailand Futures Exchange (TFEX) MTS-TFEX ©MetaTrader 5 Gateway

Introduction

Stock Exchange of Thailand (SET), which includes **Thailand Futures Exchange (TFEX)**, is using a trading system called SET_CONNECT. Using the standard FIX protocol ©MetaTrader 5 TFEX Gateway acts as a bridge between SET_CONNECT trading system and ©MetaTrader 5 Platform enabling traders access to TFEX derivative products using ©MetaTrader 5 Terminal.

Thailand Futures Exchange (TFEX) ©**MetaTrader 5 Gateway** as part of ©**MetaTrader 5 Platform** enables brokers to provide their clients with access to TFEX FUTURES products.

Below underlying assets are currently available:

EQUITIES	<i>Stock Index and Individual Stocks</i>
DEBT INSTRUMENTS	<i>Bonds and Interest Rate</i>
COMMODITIES	<i>Precious Metal, Base Metal and Energy</i>
OTHERS INDEX	<i>Exchange Rate, Commodity Index and others</i>

A more detailed list of currently available products that can be traded using the TFEX gateway along with the link to TFEX [official website](#) for more details regarding contract specifications:

SET50 Index Futures	5-Year Government Bond Futures
Single Stock Futures	3M BIBOR Futures
50 Baht Gold Futures	6M THBFIX Futures
10 Baht Gold Futures	Brent Crude Oil Futures
Silver Futures	USD Futures
5-Year Government Bond Futures	Sector Index Futures

Education regarding futures trading is provided free of charge on TFEX website:

- [Investment knowledge](#)
- [Individual investors](#)

Network Connection

Access to SET_CONNECT environment is done via Site-to-Site VPN network based on IPSec standard which provides data encryption in the most standard secure method.

Another way of accessing SET_CONNECT is via SETNET3. All the necessary information is provided by the exchange to member brokers.

Given you are a member of the exchange you will have access to all the environments available (testing, production, etc.).

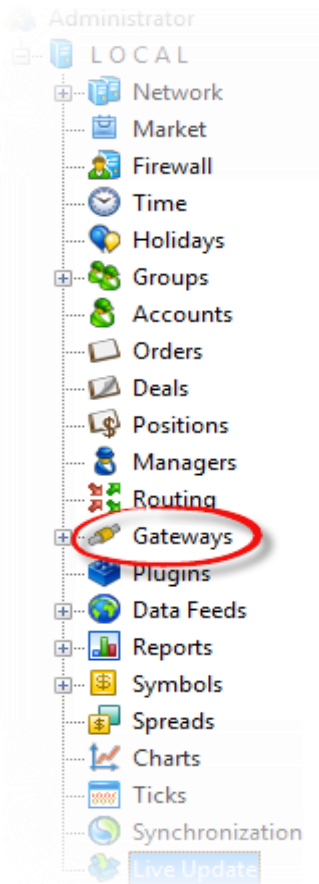

For acceptance testing the broker can use the testing environments provided by the exchange. Details on how to configure the gateway to connect to each environment are provided in this document.

Each registered broker is assigned a 4 digit member ID (i.e. 0123) which will be the basis for authentication credentials as described below:

- D0123_FIX_MD1 is the fix user for market data
- D0123_FIX_CU1 is the fix user for trading, etc.)

Each broker can request TFEX to create new test accounts by specifying the member ID, the protocol for order entry and market data (FIX protocol for both in our case), and types of transactions (normal orders, program trading, market marking).

Gateway Installation

1) Please create a folder named MTS-TFEX at **MT5_DIRECTORY**\History\Gateway where **MT5_DIRECTORY** is the installation folder for ©MetaTrader5 Platform.

2) Copy **MTS-TFEX.exe** module into **MT5_DIRECTORY**\History\Gateway\MTS-TFEX.

3) Using ©MetaTrader 5 Administrator please create a new **Symbols** folder named "TFEX".

4) Using ©MetaTrader 5 Administrator please create a new group (i.e. demo\demoTFEX) that will be used for Futures trading.

NOTE: To ensure correct margin calculation for Futures products set **Risk Management** to "for Retail Forex".

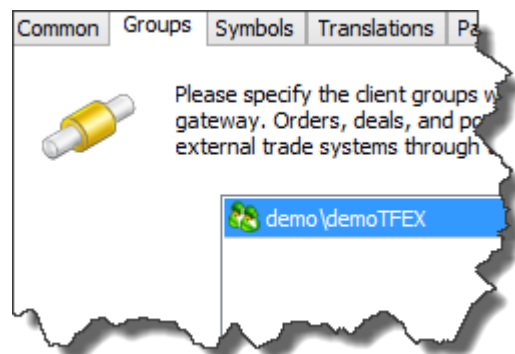

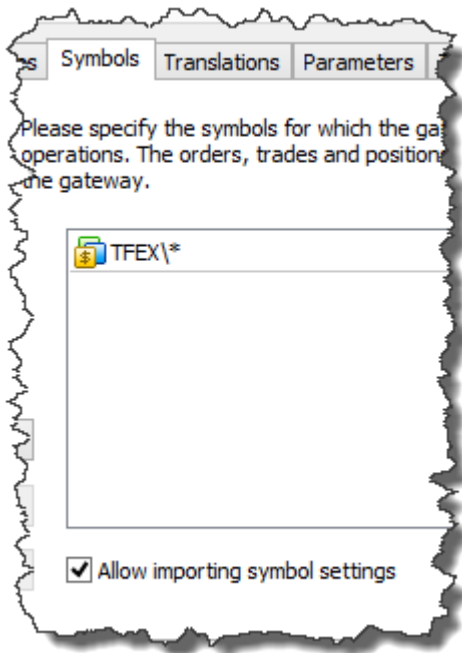

5) Add a new **MTS-TFEX** configuration under **Gateways** and select default parameters when prompted.

NOTE: If **MTS-TFEX** entry is missing from the dropdown please refer back to "Step 1" and check that the "TFEXGateway.exe" file is correctly placed in the dedicated folder.

6) Add the new group created at "Step 4" to the **Groups** tab found under the gateway properties.

7) Add "TFEX*" in the Symbols tab and make sure to check "Allow importing symbol settings" setting. This will automatically import product details from the exchange.

Gateway Parameters

Parameters tab contains settings that enable the fine tuning of various technical aspects of the gateway. Their purpose and valid values are presented in detail below.

➤ ENV - Working environment.

An environment name identifies a network of related interconnected systems providing Market Data Services, Order Entry Services and Disaster Recovery Services for both Market Data and Trading.

There are two main categories of environments: testing and production.

TESTING ENVIRONMENTS

- NEXT-C
- NEXT-A
- NEXT-B
- STAGE

PRODUCTION ENVIRONMENTS

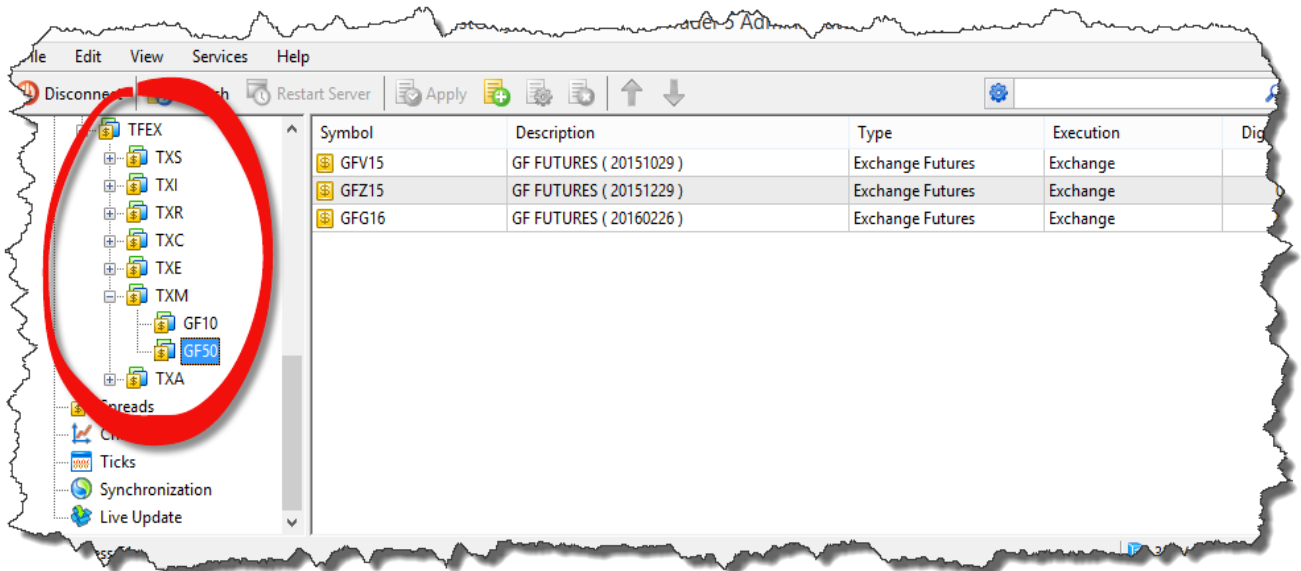

- **PROD1** (SETNET3 link group 1)
- **PROD2** (SETNET3 link group 2)

Parameter	Value
ab ENV	STAGE
ab MD_USER	0123_FIX_MD1
ab TR_USER	0123_FIX_CU1
ab MD_PASS	****
ab TR_PASS	****
ab ENTERING_TRADER	0123_FIX_CU1_TR
ab CLEARING_FIRM	C123
ab TR_ACCOUNT	*
ab TR_ACCOUNT_TYPE	*

- MD_USER - Market data user.
- TR_USER - Trading User/Central User/Acting User.
- MD_PASS / TR_PASS - Passwords for market data and trading users.
- ENTERING_TRADER - Trading group user.
- CLEARING_FIRM - Clearing ID provided by TFEX.
- TR_ACCOUNT / TR_ACCOUNT_TYPE - Trading account details provided by TFEX.

TFEX Symbols

The gateway will automatically import tradeable products from the exchange or update existing products while it is online. The products will be imported into a tree like structure according to their market ID and sector ID.

The products are structured into a subtree with the following meaning:

TFEX/MARKET/SEGMENT/SERIES

For example the October 2015 10 Baht Gold Futures will be under the below path:

TFEX/TXM/GF10/GF10V15

NOTE: The new TFEX products will be available to traders only after ©MetaTrader 5 Main Trader Server and ©MetaTrader 5 History Server are restarted. Servers can be safely restarted between trading sessions. Restarting servers takes only few seconds.

NOTE: Expired futures contracts or products simply not available anymore will automatically be moved to **TFEX/EXIPIRED** folder using the same tree-like structure

Symbol Group Settings

Under “Group settings” the broker controls what TFEX products are available to clients (products visible and tradable in ©MetaTrader 5 Client Terminal).

An example of symbol configuration for a Futures trading group is presented below:

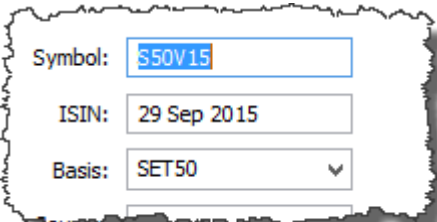

Symbol	Spread	Trade
TFEX\TXI\S50IF*	Default	Default
TFEX\TXM*	Default	Default
TFEX\TXE*	Default	Default
TFEX\TXC*	Default	Default
TFEX\TXA*	Default	Default
TFEX\TXS\SSF3*	Default	Default
TFEX\TXS\SSF4*	Default	Default

Symbol Settings and Configuration

This section will provide instructions on setting up and configuring the symbols to function correctly according to TFEX specifications.

NOTE: fields marked with **TFEX** are populated using TFEX provided data and should not be modified.

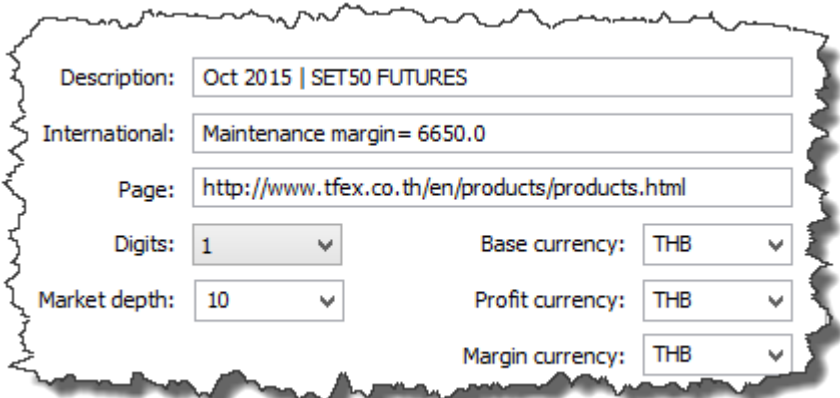

NOTE: fields marked with **THB** contain money value in Thai Baht.

Symbol - Futures contract name. **TFEX**

ISIN - Settlement date. **TFEX** (**NOTE:** not the actual ISIN code)

Basis - Underlying asset (in this case SET50 index). **TFEX**

Description – short description of the product including the standard notation for Futures (month and year of the expiration date – **Oct 2015**) followed by the contract name. **TFEX**

“MetaTrader” is a trademark of [MetaQuotes Software Corp.](#)

©2015 Copyrights reserved for [MetaTrader Solutions](#)

International - additional information about the contract. **TFEX**

Page -link to official TFEX products page.

Digits - number of digits after the decimal point. **TFEX**

Market depth – specify the number of levels of book depth displayed in the terminal.

All currency - In accordance to TFEX all the currency fields need to be in Thai Baht.

Contract size:	<input type="text" value="200"/>	Tick size:	<input type="text" value="0.1"/>	Tick value:	<input type="text" value="20.00000000"/>
Calculation:	Exchange Futures	Limit & stop level:	<input type="text" value="0"/>	pt	

Contract size - contract multiplier. **TFEX**

Tick size - minimum tick change. **TFEX**

Tick value - the money value for one tick. **TFEX**

Settlement price:	<input type="text" value="948.0"/>
Minimum price:	<input type="text" value="663.6"/>
Maximum price:	<input type="text" value="1232.4"/>

Settlement price - last settlement price (the date this price was recorded is in the ISIN field). **THB TFEX**

Minimum/Maximum price - order price limits (orders with prices outside these values will immediately be rejected). **THB TFEX**

Execution:	Exchange
------------	----------

Execution – “Exchange” states that orders for this product will be processed by an external exchange as opposed to being processed by the

©MetaTrader

5 platform.

Initial margin:

Maintenance margin:

Initial margin – Money amount of initial margin as advised by the exchange. **THB TFEX**

Maintenance margin – Money amount of maintenance margin.

"MetaTrader" is a trademark of [MetaQuotes Software Corp.](#)

©2015 Copyrights reserved for [MetaTrader Solutions](#)

NOTE: This amount needs to be 0 (exchange amount specified in the **International** field).

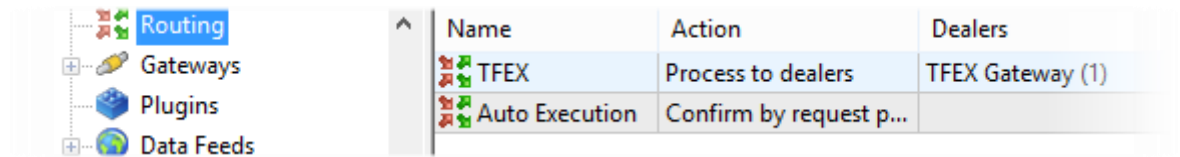

Margin Call and **Stop Out** levels will automatically be calculated by ©MetaTrader 5 Platform using margin settings for the group.

Use time limits From: 1970.01.01 00:00 To: 2015.12.29 00:00

To - contract expiration date (last trading day).

Routing

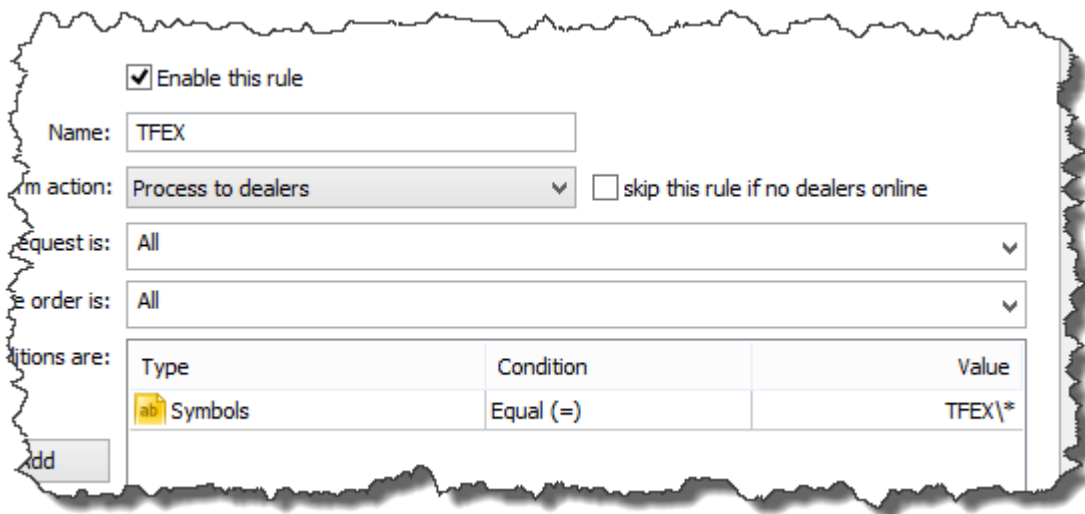

Name	Action	Dealers
TFEX	Process to dealers	TFEX Gateway (1)
Auto Execution	Confirm by request p...	

A new “Routing” rule will need to be added and configured as shown below. The TFEX rule should be before “Auto Execution” rule.

The rule will instruct the ©MetaTrader5 Platform to send TFEX Futures orders to the TFEX Gateway for correct processing.

The “Common” of the routing rule:

Enable this rule

Name:

Form action: skip this rule if no dealers online

Request is:

Order is:

Conditions are:

Type	Condition	Value
 Symbols	Equal (=)	TFEX*

The “Dealers” tab of the Routing rule:

Login	Name
 1	TFEX Gateway

NOTE: rule definition is mandatory for a correct processing of TFEX Futures orders.

Margin calculation for Futures.

When trading Futures only a fraction of the contract's full value is required to be available in the trader's account. This fraction, also known as the Initial Margin, has a different value for each type of contract and it's calculated and provided by the exchange.

Market Watch: 15:32:36	
S50H16, Mar 2016 SET50 FUTURES	
○ Tick Size	0.1
○ Tick Value	20.00000
○ Initial margin	9500.00
○ Lower Limit	702.4

TFEX Gateway automatically populates Initial Margin amounts for all TFEX imported products in ©MetaTrader 5 Platform.

The screenshots demonstrate how the Initial Margin amounting to THB 9500 gets locked from trader's balance while he is trading on a SET50 Futures contract.

Symbol	Order	Time /	Type	Volume
s50h16		2015.07.09 17:27:26	buy	1.00
Balance: 60 100.00 THB Equity: 60 100.00 Margin: 9 500.00 Free Margin: 50 600.00 Margin Level: 632.63 %				

Mark-to-Market

Shortly Mark-to-Market is the process of locking-in daily losses and gains.

It is triggered at the end of the trading day when the settlement price for each product is calculated and published by the exchange.

Mark-to-Market is supported and automatically executed by TFEX Gateway as soon as the Settlement price is published by the exchange.

Deals generated by the Mark-to-Market process.

2015.07.10 01:44:45	1001	5052	S50H16	sell	out	1.00	775.0	Variation margin
2015.07.10 01:44:45	1001	5053	S50H16	buy	in	1.00	775.0	Variation margin

Mark-To-Market process generates two Deals inside the ©MetaTrader5 Platform as follows:

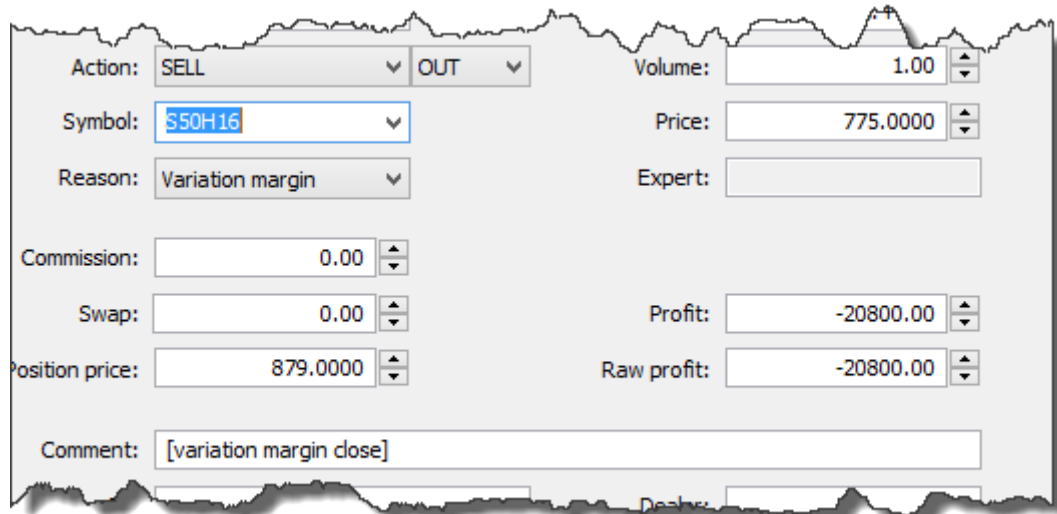

1. An "OUT" type deal for closing the existing position at the current settlement price.
2. An "IN" type deal for opening a new position with the same volume and product at the current settlement price.

The deals are presented in more detail on the next page.

The "OUT" deal for locking-in the profit/loss.

Action: SELL OUT Volume: 1.00
 Symbol: S50H16 Price: 775.0000
 Reason: Variation margin Expert:
 Commission: 0.00
 Swap: 0.00 Profit: -20800.00
 Position price: 879.0000 Raw profit: -20800.00
 Comment: [variation margin close]

The "IN" deal for re-opening the old position.

Action: BUY IN Volume: 1.00
 Symbol: S50H16 Price: 775.0000
 Reason: Variation margin Expert:
 Commission: 0.00
 Swap: 0.00 Profit: 0.00
 Position price: 0.0000 Raw profit: 0.00
 Comment: [variation margin open]

The Mark-to-Market process is recorded in both server and gateway journals as shown below.

©MetaTrader 5 Main Trade Server journal records showing the Mark-to-Market process.

TFEX Gateway	'demo\demofutures': variation margin for S50H16 positions started [variation margin for S50H16, settlement price: 755.0]
End of Session	'1001': variation margin deal performed [#5056 sell 1.00 S50H16 at 755.0]
End of Session	'1001': variation margin deal performed [#5057 buy 1.00 S50H16 at 755.0]
TFEX Gateway	'demo\demofutures': variation margin for S50H16 positions completed, 1 position(s) updated

Gateway log

The section below explains in more detail the journal entries created as an order is processed by the ©TFEX Gateway and sent to SET_CONNECT.

©TFEX Gateway Journal entries as a new order is processed.

Gateway	'0'->'1001': request #10360420 received (#2988171 exchange buy 1.00 S50H16 at market)
Gateway	'1001': request #10360420 answered - Placed (#2988171 exchange buy 1.00 S50H16 at market)
Gateway	execution send complete - added order #2988171, buy 1.00 S50H16 at market [based on order 'ON-2-1444894061851-1']

Each detail is explained below:

- **#2988171**: is the ©MetaTrader 5 Platform order number.
- **'0' -> '1001'**
 - '0' is the Dealer ID (in this case the client itself placed the order).
If dealer 7832 places an order on behalf of trader 1001 this value will be '7832'.
 - 1001 is the trader ID as assigned by ©MetaTrader 5 Platform.
- Second line indicates that the request was accepted by the Gateway and sent to TFEX but not yet executed.
- Third line indicates that the order sent via the gateway was successfully received and executed by TFEX and the SET_CONNECT order number is ON-2-1444894061851-1.
